lucky luke comics download cbr Lucky Luke free comics cbr lucky luke comics download free cbr Category:Lucky Luke (Fantagraphics)Identification of novel disease-causing mutations in PITX2. To identify novel PITX2 mutations and to assess their significance in clinical management of patients with congenital anophthalmia, we performed whole exome sequencing (WES) in a single patient. Sequencing data were aligned to the human genome (GRCh37/hg19) using the Burrows-Wheeler Aligner software (BWA), and single nucleotide variants and small insertion/deletion variants were called using the Genome Analysis Toolkit (GATK). Candidate variants were confirmed by polymerase chain reaction amplification and DNA sequencing, and their significance was assessed using the Phenotypic Magnitude (PM) scoring system. In addition, two different bioinformatics tools were used to assess potential pathogenicity. A single patient was sequenced by WES. Based on the PM score, no potential disease-causing variants were detected in coding regions. However, a novel heterozygous variant (c.1380C>T, p.Q460X) was identified, which was absent from 522 control chromosomes. The variant was predicted to be deleterious by both SIFT and PolyPhen-2 software. A case of congenital anophthalmia associated with a novel PITX2 mutation is reported. A novel PITX2 mutation was identified by WES and confirmed by Sanger sequencing. The identified mutation was consistent with the PM score, and the variant was predicted to be deleterious by in silico analyses. Identification of novel disease-causing mutations may help to clarify the molecular basis of rare disease. A majority of US citizens approve of the way Barack Obama is handling the economy, his foreign policy, healthcare and the budget deficit, according to the most recent polling on the president's job performance. Obama polled above 50 per cent approval ratings in the last two months of 2009, including 57 per cent in October, the highest among the eight years of his presidency, according to the Pew Research Center's US Trends poll. Support for his economic management and foreign policy stood at 53 per cent in September and 53 per cent in October, respectively. His handling of the US deficit, 51 per cent approval in September, and healthcare at the same time 2d92ce491b
